KPI Definition Table

KPI Name	Business Meaning	Grain	Source Tables	Join Path	Numerator
total_leads	Total seller leads assigned to a buyer	lead_id	leads	leads	count(distinct lead_id)
total_upsheets	Total vehicle-level deal records handled by a buyer	upsheet_id	upsheets	upsheets	count(distinct upsheet_i
leads_with_opportunity	Leads that progressed to at least one proposal	lead_id	leads, upsheets, opportunities	leads → upsheets → opportunities	count(distinct lead_id wi opportunity)
lead_to_opportunity_conversion_rate	Share of assigned leads that reached proposal stage	lead_id	leads, upsheets, opportunities	leads → upsheets → opportunities	distinct leads with oppor
total_opportunities	Total proposal records created	opportunity_id	opportunities, upsheets	opportunities → upsheets	count(opportunity_id)
opportunity_upsheets	Upsheets that have at least one opportunity	upsheet_id	upsheets, opportunities	upsheets → opportunities	count(distinct upsheet_i opportunity)
sold_upsheets	Upsheets that reached sold stage	upsheet_id	upsheets	upsheets	count(distinct upsheet_i sold_date is not null)
delivered_upsheets	Upsheets that reached delivery	upsheet_id	upsheets	upsheets	count(distinct upsheet_i delivered_date is not nul
delivered_opportunity_upsheets	Opportunity-backed upsheets that got delivered	upsheet_id	upsheets, opportunities	upsheets → opportunities	count(distinct upsheet_i opportunity and delivere not null)
close_rate	Share of opportunity-backed upsheets that reached delivery	upsheet_id	upsheets, opportunities	upsheets → opportunities	delivered opportunity up
total_expected_amount	Total proposed value	opportunity_id	opportunities, upsheets	opportunities → upsheets	sum(expected_amount)

KPI Name	Business Meaning	Grain	Source Tables	Join Path	Numerator
latest_expected_amount	Latest proposal value per upsheet	upsheet_id	opportunities, upsheets	upsheets → latest opportunity	latest expected_amount upsheet
total_sale_value	Total realized sales amount	upsheet_id	upsheets	upsheets	sum(sale_price where sc not null)
avg_sale_value	Average realized sale amount	upsheet_id	upsheets	upsheets	avg(sale_price where so not null)
realization_amount	Difference between actual sale and latest expected amount	upsheet_id	upsheets, opportunities	upsheets → latest opportunity	`sale_price - latest_expected_amount`
realization_percent	Percent difference between actual sale and latest expected amount	upsheet_id	upsheets, opportunities	upsheets → latest opportunity	`sale_price - latest_expected_amount`
avg_realization_percent	Average proposal-vs-actual performance	upsheet_id	upsheets, opportunities	upsheets → latest opportunity	avg(realization_percent)
buyer_workload_rank	Ranking by work assigned	buyer	leads, upsheets	buyers → leads / buyers → upsheets	total leads, total upsheet
buyer_conversion_rank	Ranking by funnel efficiency	buyer	leads, upsheets, opportunities	buyers → leads → upsheets → opportunities	lead_to_opportunity_con
buyer_execution_rank	Ranking by execution outcomes	buyer	upsheets, opportunities	buyers → upsheets → opportunities	delivered_upsheets, clos
buyer_value_rank	Ranking by commercial value	buyer	upsheets, opportunities	buyers → upsheets → latest opportunity	total_sale_value, avg_realization_percent

Defined Rules

A)Counting grain rules

- Funnel KPIs use `distinct lead_id`
- Deal execution KPIs use `distinct upsheet_id`
- Proposal activity KPIs use `opportunity_id`
- Value comparison KPIs use `upsheet_id` + **latest opportunity per upsheet**

B)Buyer ownership rules

- Lead KPIs use `leads.assigned_user_id`
- Upsheet KPIs use `upsheets.assigned_user_id`

C)Latest opportunity rule

For any KPI comparing proposal value to actual sale value, choose the **latest opportunity by** `created_at` **for each upsheet**.

D)Close rate rule

Close rate should use **distinct upsheets with opportunity** as the denominator, not raw opportunity rows.
